

# Product Code Groups & Alternative Navigation

In addition to functioning as Sliders, Product Code Groups can also act as an alternative or supplemental navigation on the ecommerce site. When the site is configured to show the product groups navigation it will show above the categories and the groups can be set up in a custom order (not stuck with alphanumeric sorting like categories are). Product groups cannot be nested within each other like the categories can be.

You can toggle the visibility of groups showing up in the left-navigation by logging into the ecom admin tool, clicking Site, clicking Ecom Setting, and then filtering to / changing this setting: `groups_hide_menu_display`

When **groups\_hide\_menu\_display = false**

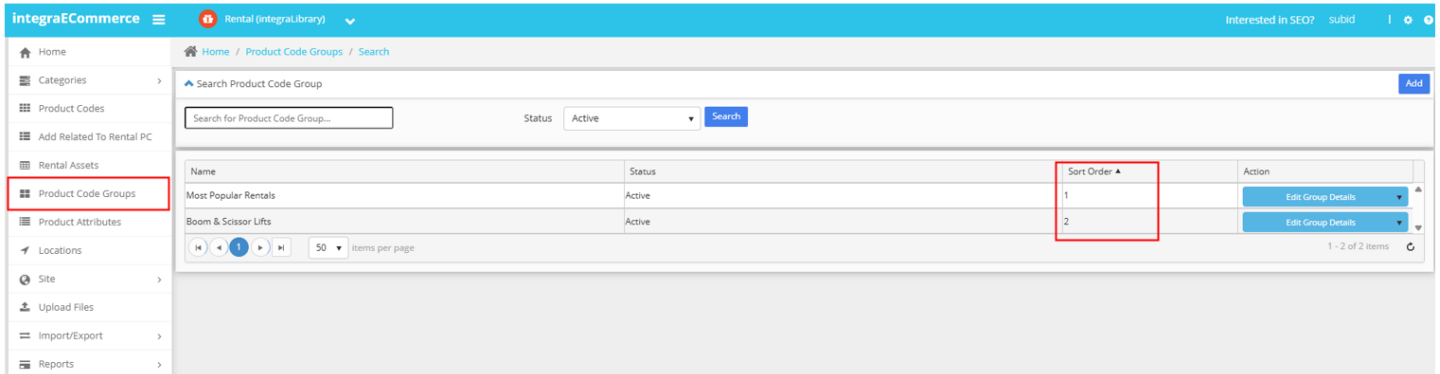

Show Groups Navigation on the left side of the page above the categories.

When **groups\_hide\_menu\_display = true**

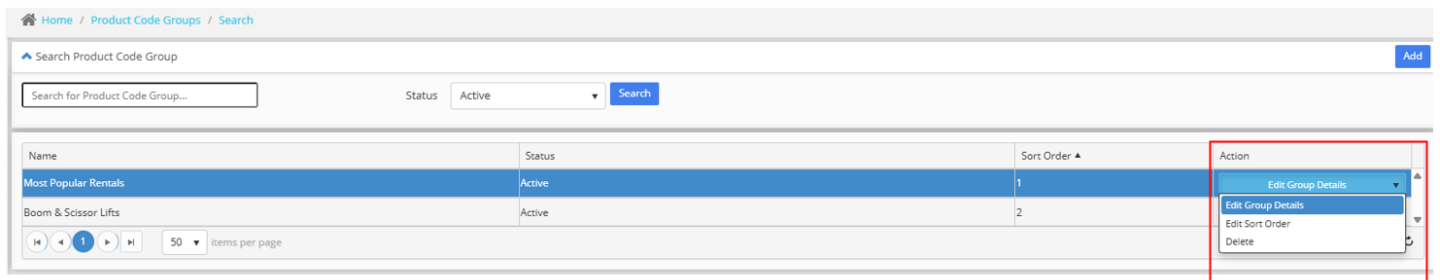

Hide Groups Navigation on the left side of the page above the categories.

Inside the ECOM Admin Tool, when you first click Product Code Groups in the Menu, can you see the Sort Order in the second to last column. Clicking the Sort Order Title will sort these smallest to largest or vice versa.

To rearrange the product group sort order, you can click the Edit Group Details button and selecting Edit Sort Order. You can also select Edit Group Details for more customizations of the group including editing the sort order. It is easier to edit the sort order from this screen that shows all the groups in a list.

If you have any issues, please reach out to your Digital Experiences Consultant, Account Manager, or the Support Team through the usual channels.
